Purpose

MOD RRICHNG changes values in the rainfall/runoff model moisture
input time series (usually MAP or RAIM) beginning at the date
specified.

Format

Use Format B3 with two dates on the command card.

    .RRICHNG date validdate [FGROUP]
    identifier values [/ opname]

    where date   is the date for which the MOD applies and must be
                       greater than or equal to Technique STARTRUN
          validdate is the date after which the MOD is no longer valid
                       and is usually less than or equal to Technique
                       LSTCMPDY
          values   are the rainfall/runoff model moisture input time
                       series values

This MOD is only enabled if the date on the MOD card is less than or
equal to validdate or Technique LSTCMPDY. If the date is greater
than validdate then the change is made only if validdate is equal to
Technique LSTCMPDY.

Example

In this example the input precipitation to the rainfall/runoff model
(SAC-SMA in this case) is changed for several Segments. The first
values are applied at 12Z since the hour is not specified in the date
field. For Segment LXVC2 the change is only made prior to the
SAC-SMA Operation with the name LXVC2UPR.

    .RRICHNG 1021 1022
    WTTO2 .15 1.2 2.7 .4
    KANO2 0 1.7 3.5
    LXVC2 2.8 .7 / LXVC2UPR
    PLYK1 0   2 1.5
