

Purpose

Technique PP24TIME sets whether the time associated with precipitation totals is checked against the specified last computational date or last hour of observed data (Technique LSTCMPDY [[Hyperlink](#)]).

Valid values are NO (0) and YES (1).

The Global default is YES (1).

This Technique is Universal.

Form of Input

PP24TIME(integer)

where integer is 0 or 1 specifying whether the time check is off or on

Example

PP24TIME

The time check will be made and only precipitation totals corresponding to the last hour of observed data will be used.

PP24TIME(0)

No time check will be made thus partial-day reports will be used as full day totals.
