VI.5.3D-PRINTSNW   PROGRAM FCST HCL TECHNIQUE PRINTSNW

Purpose

Technique PRINTSNW sets whether print output is to be generated by the
snow Operations.

Valid values are NO (0), YES (1) and criteria (2).

The Global default value is criteria (2).

This Technique is Nonuniversal.

Form of Input

PRINTSNW(integer)

    where integer is 0, 1 or 2 specifying:
                     0 = do not print
                     1 = print
                     2 = rely on criteria in the Operations to determine
                         whether or not to print

Example

PRINTSNW(0)

    Output from the snow operations will not be printed.

PRINTSNW(2)

    Output from the snow operations will be printed based on Operation
    criteria.

PRINTSNW(1) (DRGC2)

    Output from the snow operations in the Segment DRGC2 will be
    printed.
