Purpose

Technique ERRORPR sets the unit number for error printout.

If the unit number is different than the Technique PRINT unit number then the error messages will be printed to both units.

Valid values are 6, 8 and 9.

The Global default is 9.

This Technique is Universal.

Form of Input

ERRORPR(integer)

   where integer is a number from 6, 8 or 9

Example

ERRORPR(6)

   This sets the error printout to unit 6.
