VI.6.1   INTRODUCTION TO UTILITY PROGRAMS

The Operational Forecast System utility programs are used to:

   - maintain the data bases
   - display contents of the data bases
   - change values in the data bases

The data bases that have utility programs are:

   o Preprocessor Data Base

      - add and delete data types
      - change data type specifications
      - reset statistics
      - display contents
      - edit data values

   o Processed Data Base

      - add and delete data types
      - change data type specifications
      - define special time series
      - display contents
      - edit time series values
