Purpose

Command TSHDRS prints header information for time series stored in
the Processed Data Base.

All headers, all headers of a specified type or headers for
individual time series can be printed.

Input Data

Card	Field	Format	Contents
1	1		'@TSHDRS'
2	1	A4	'ALL' or data type code 1/
	2	A	'ALL', 'REG', 'FUT' or 'BOTH' 2/ If data type has separate future record then FUT indicates print the header of the future time series and BOTH indicates print both the regular and future time series headers.
	3		'ALL' indicates print all time series of data type specified in field 1. If field is not entered then a list of time series identifiers must be entered on following cards.
3	1-n	A8	List of time series identifiers. An '&' as the last field indicates the list is continued on the next card. If 'FUT' is specified in field 2 of card 2 and the data type has a separate future record then the future time series identifier must be specified.

   Repeat cards 2 and 3 as needed.

| 4 | 1 | | 'END' |

Notes:

1/ If 'ALL' is specified in field 1 then all time series headers of
   all data types will be printed.

2/ If 'ALL' is specified in field 2 then all time series headers of
   the specified data type will be printed. If the data type has
   separate future records then all future time series headers will
   also be printed.

Examples

```
@TSHDRS
 ALL
 END

@TSHDRS
 PTPE ALL
 MAT BOTH
 MAT1 MAT2 MAT3 &
  MAT4
 MAT FUT
 FMAT1 FMAT4
 MAP REG ALL
 END
```
