VIII.3.3-RES-SNGL-S-PASN26   SUBROUTINE PASN26

Description

Subroutine PASN26 sets the discharge at the end of a time interval
equal to the inflow. However if inflow is less than required minimum
outflow then the discharge will be later set to required minimum
outflow.

Calling Sequence

CALL PASN26 (STOR,ELEV)

Argument List

| | Input/ | | | |
Argument	Output	Type	Dimension	Description
STOR	Input	R*4	NSE	Storages for pool elevation versus storage relation
ELEV	Input	R*4	NSE	Elevations for elevation versus storage relation

Dimension variable is in common block RESV26.
