Description

Subroutine WPPCOF modifies the control information for the
Preprocessor Parametric Data Base files that contain only
Computational Order parameter record types to indicate that the file
is empty.

This routine eliminates the need to reorder files containing only
Computational Order parameter types if the parameter records have been
updated several times.

Calling Sequence

CALL WPPCOF (ISTAT)

Argument List

Argument	Input/ Output	Type	Dimension	Description
ISTAT	Output	I*4	1	Status: 0 = okay 1 = one or more of the parameter control records could not be reset because there are other non-computational order parameter types in the file
