K-2. SHEF, comma delimited, and ASCII text formats

1.0 SHEF

Currently no standard-alone routines are available for SHEF-encoding selected data. The capability to SHEF-encode data from the SHEF data value tables is part of Datview. Refer to the DatView documentation, Section J-2, for more information.

2.0 comma delimited format

Currently no stand-alone routines are available to write out selected data in comma separated format. For the SHEF data values tables, the option to export data in comma delimited format is available in the DatView application. Refer to the DatView documentation, Section J-2, for more information.

Data from these and other tables can be exported to comma delimited format by using psql and the \copy command.

3.0 ASCII text format

Currently no stand-alone routines are available to write out selected data in ASCII text format. For the SHEF data values tables, the option to export data in ASCII format is available in the DatView application. Refer to the DatView documentation, Section J-2, for more information.

Data from these and other tables can be exported to ASCII text format by using psql.
