

L-3. rax.profile

1.0 General Information

The rax.profile is a Korn script that sets up the proper user environment and search paths for RAX applications. Most programs have a script wrapped around them, which runs this script first before executing the program. This script eliminates problems some users experienced due to improper environment and search paths in previous builds. Any user can run this script. The script is located in /rfc_arc/lib directory.

1.1 Enhancements/Bug Fixes/Changes

Build OB7.2

This script is new to this build.

2.0 Troubleshooting Information

If for some reason the script does not seem to have set-up the proper environment and search paths, contact the RFC Support Group.
