

Turning Sharply Colder with Snow Developing Today

Current Watches, Warnings, and Advisories

Weather Message of the Day:

A strong cold front will plunge south across Wyoming today, spreading snow, blustery wind and sharply colder temperatures across the area. Many roads are expected to become slick with black ice possible along with limited visibility in snow and blowing snow.

Winter Weather Advisories in Effect

Key Points

Hazards: Snow, abruptly colder temperatures.

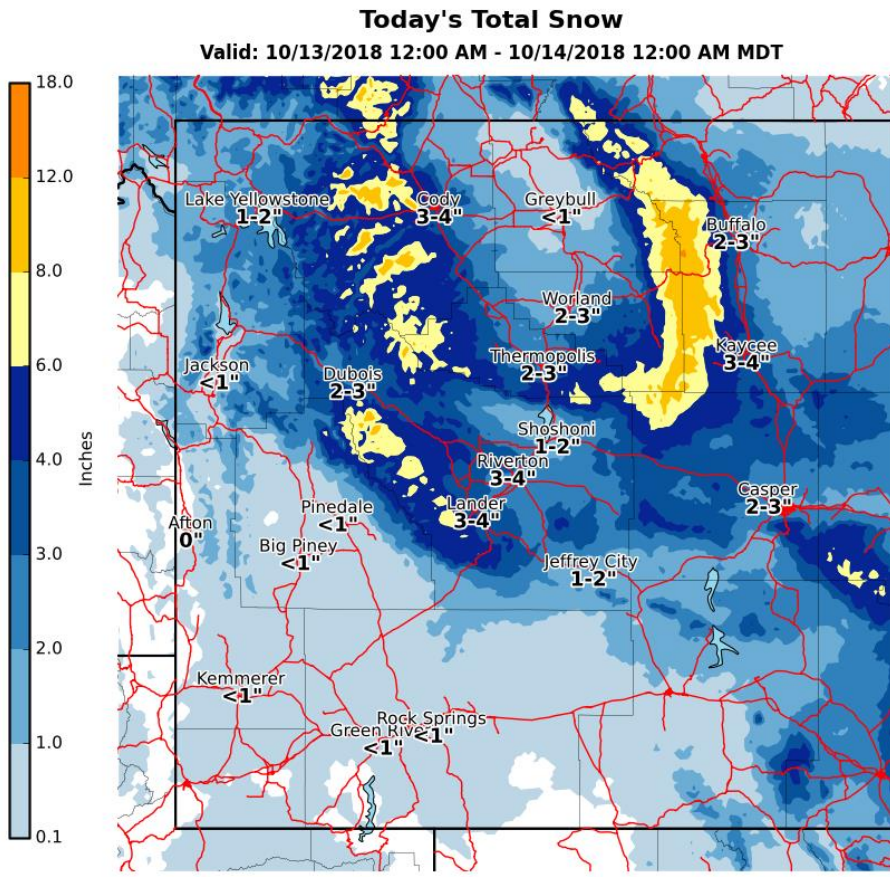

Areas Impacted: Along and east of the Continental Divide

Timing & Duration: Today and Tonight

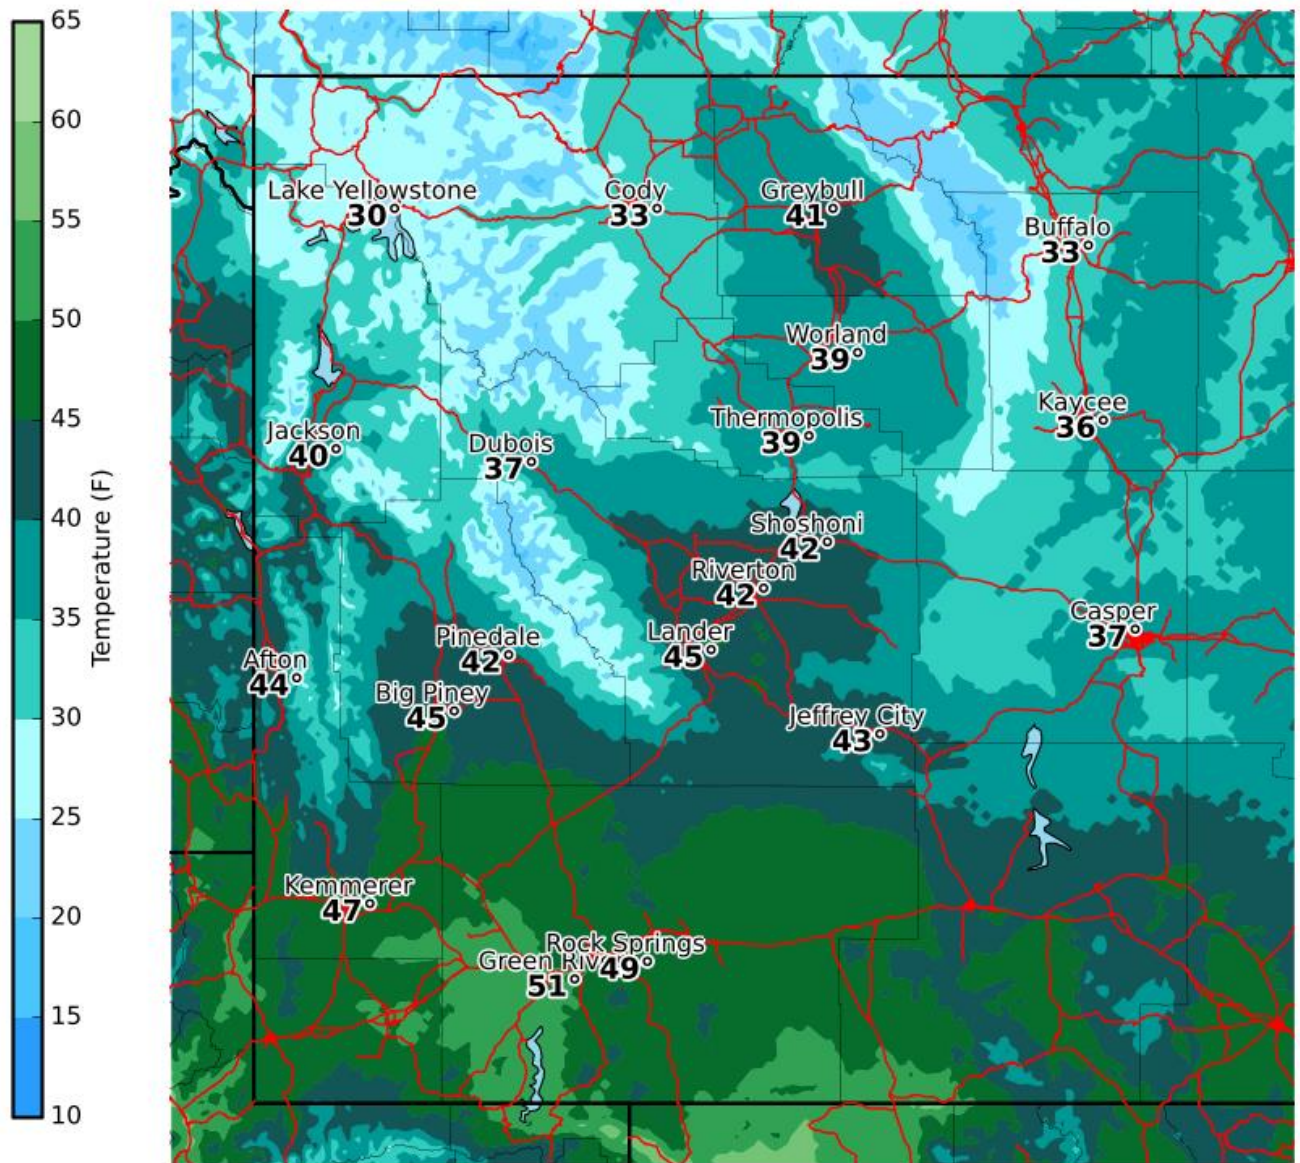

Impacts: Plan on slippery road conditions with limited visibility on snow and blowing snow. Black ice will likely form on some road surfaces. Hunters and campers should expect rapidly deteriorating conditions in snow and falling temperatures.
