

April 2017 Climate Review for Puerto Rico and U.S. Virgin Islands.

Synopsis: April 2017 can be described as a wet month across the area except for Saint Thomas and south Puerto Rico.

Summary

A typical transitional weather pattern was observed across the region during April. After a mainly fair weather pattern the first week of the month, a fairly active pattern was observed from approximately the 10th of the month onwards. Frequent trofiness and abundant low to mid-level moisture created a favorable environment for the generation of showers and thunderstorms across the majority of the islands. These rainfall events produced several days of urban and small stream flooding as well as river flooding across most of Puerto Rico.

Based on the Cooperative Observer Network Data (COOP), 138 % of the normal rainfall was observed across Puerto Rico. Across St. Croix, an average rainfall total of 6.80 inches was observed which is 4.33 inches above normal (Table 1). In terms of temperature, the mean temperature for PR was 76.1°F, which is approximately 0.3°F warmer than the 30-year average from the National Centers for Environmental Information (NCEI).

At the primary climatological data sites, a rainfall total of 7.69 and 1.05 inches was observed at Henry E. Rohlsen Airport in Saint Croix (TISX) and Cyril E King Airport in St Thomas (TIST), respectively. This is 5.56 inches above normal at TISX; but 1.69 inches below normal at TIST. In terms of temperature, the mean temperature at TISX and TIST was 79.2 and 79.4F, which is 0.8 and 1.2°F below normal, respectively.

Looking Ahead

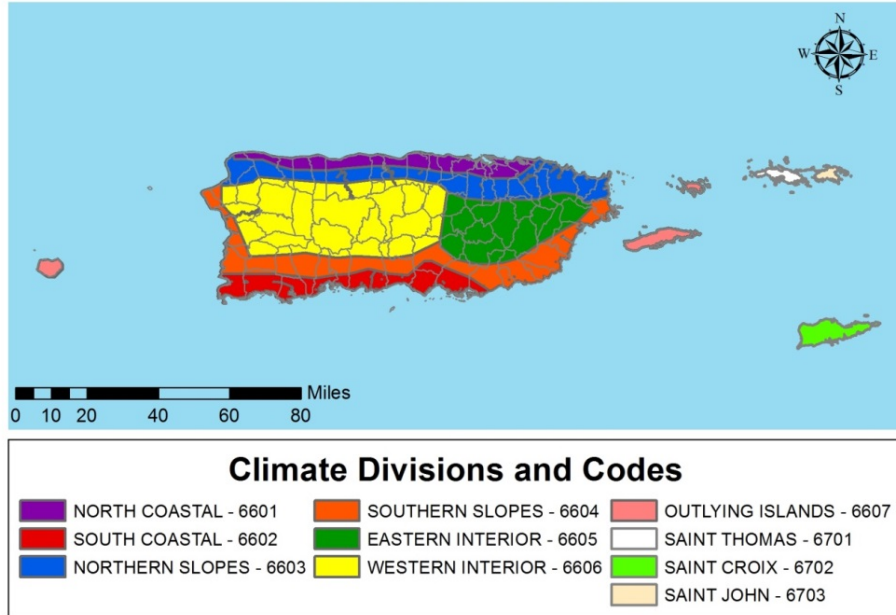

As ENSO conditions are currently neutral, no impact on Caribbean rainfall is expected. However, with a possible El Niño on forecast by Aug-Sep-Oct, there are increased chances for drier than usual conditions. Warm Sea Surface Temperatures (SSTs) across the north Caribbean may lead to above-average humidity and atmospheric instability going into the wet season in the northern islands, which tilts the odds towards a wetter wet season. With SSTs remaining near or slightly above average throughout the region, air temperatures are also expected to be warmer than average.
