

National Weather Service

Tallahassee, Florida

Weather Enthusiasts Needed! We need your help observing the weather!

Do you ever wonder how much rainfall you received from a recent thunderstorm? If so, a volunteer weather observing program needs your help! The Community Collaborative Rain, Hail, and Snow network, or **CoCoRaHS**, is looking for new volunteers across the Tri-state region. This grassroots effort is part of a growing national network of home-based and amateur rain spotters with a goal of providing a high-density precipitation network that will supplement existing observations.

Given the variable pattern of rainfall, it's important to understand just how much rain fell in a particular area. How many times have you heard the rainfall report on TV, radio or social media from an official observation and thought to yourself, "That's not what I got?!?". This is your chance to help! By providing your daily precipitation data, you truly help many folks in one way or another -- whether it's National Weather Service meteorologists, agricultural interests, forestry officials, water management employees, or emergency management personnel.

CoCoRaHS came about as a result of a devastating flash flood that hit Fort Collins, Colorado, in July 1997. A local severe thunderstorm dumped over a foot of rain in several hours while other portions of the city had only modest rainfall. CoCoRaHS was born in 1998 with the intent of doing a better job of mapping and reporting intense storms. Today, the CoCoRaHS network had reached all 50 states, Canada, and the Bahamas. On most days, nine to ten thousand observations are being reported across the country. Through CoCoRaHS, thousands of volunteers, young and old, document the size, intensity, duration and patterns of rain, hail, and snow by taking simple measurements in their own backyards.

Volunteers may obtain an official rain gauge through the CoCoRaHS website www.cocorahs.org for about \$30 plus shipping. In addition to the 4-inch plastic rain gauge, volunteers are required to take a short online training module and then can use the CoCoRaHS website or mobile app to submit their daily reports (preferably around 7:00 AM EST/8:00 AM EDT). Observations are immediately available on maps and reports for the public to view. The process takes less than five minutes a day, but the impact to the community is tenfold: By providing high quality, accurate measurements, the observers are able to supplement existing networks and provide useful results to the National Weather Service, other scientists, resource managers, decision makers and other users.

How does one become a CoCoRaHS observer? Go to the CoCoRaHS website above and click on the "Join CoCoRaHS" emblem on the upper right side of the main website. After registering, take the simple online training, order your 4-inch rain gauge and start reporting!
