Increasing Rain Chances for Thursday and Friday

Rainfall will overspread the entire region on Thursday and gradually end from west to east on Friday.

While 1-3 inches of rain is forecast south of I-10, isolated amounts around 5 inches cannot be ruled out along the Panhandle and western Big Bend Gulf coast. If these higher amounts occur, it would be across an isolated area.

**Timing:**
The heaviest rainfall is expected Thursday afternoon and Thursday Night.

**Threat:**
Nuisance flooding in poor drainage areas.
