...Storm Total Rainfall Amounts...

This list of rainfall totals has been updated to include more stations across the area (140 stations total). Heavy rainfall affected our forecast area for multiple days in a row, leading to very large rainfall totals. The ingredients for the heavy rain included a moist subtropical jet stream, a series of upper level disturbances, and a generally stationary surface front. The rain in this event fell over the course of 5 days.

CLIMATE FACT:

Tallahassee's normal February rainfall is 4.85", and normal yearly rainfall is 59.23". By comparison in this event, totals across much of the city (including the official climate site at the airport) ranged from 10 to 13 inches. That would be 200-270% of the normal rainfall for the entire month of February, and 17-22% of the normal rainfall for an entire year.

We will update this product as additional rainfall reports are received. Amounts are from 7 AM EST Friday February 22 through 7 PM EST Tuesday February 26.
