Our rainy season got off to a slow start as the high-pressure ridge axis setup south of the region with many days of west to southwest flow taking much of the shower and thunderstorm activity into the eastern half of the Florida peninsula. There were some days that we saw a more typical pattern with afternoon and evening thunderstorms, but overall, for the month most of the region ended up below normal (orange/red areas on Percent of Normal map), while a few small areas in the interior were near to slightly above normal (gray/green areas on Percent of Normal map).
