Severe Weather Details

- Primary hazard will be hail and strong storms
- Primary time frame 2 PM – 7 PM today
- Best chance for a strong to severe storm will be in east central Kansas

General Thunderstorms

1 - Marginal Risk

2 - Slight Risk

Heavy Precipitation & Flooding Details

- Widespread 1 to 2 inches of rain is likely.
- Some areas may exceed 2.25" with the best chance in east central Kansas
- Map below is the 'most likely forecast'. Expect a wider range with local areas receiving up to an inch more or less than this forecast.
- River flows remain low, and flooding is not a substantial concern outside of localized areas if intense rain develops.
