Severe Weather Details

- Primary hazard will be hail and strong storms
- Primary time frame 2 PM – 7 PM today
- Best chance for a strong to severe storm will be in east central Kansas

![Severe Weather Map]

Legend:
- General Thunderstorms
- 1 - Marginal Risk
- 2 - Slight Risk
Widespread 1 to 2 inches of rain is likely.

Some areas may exceed 2.25” with the best chance in east central Kansas

Map below is the ‘most likely forecast’. Expect a wider range with local areas receiving up to an inch more or less than this forecast.

River flows remain low, and flooding is not a substantial concern outside of localized areas if intense rain develops.
