

## Light Snow Accumulations Overnight

■ Winter Weather Advisory

### Weather Message of the Day:

- ✓ Winter Weather Advisory is in effect overnight tonight for light snow and strong north winds of 20-25 mph with gusts to 35 mph.
- ✓ Snow amounts from 1 to 3 inches are possible across east central Kansas through Thursday morning, leading to travel impacts during the overnight and morning commute.
- ✓ If temperatures fall close to freezing at a slightly faster rate, locally higher amounts would be possible.

### Important Forecast Changes

Threat for thunderstorms removed for this evening. Increased snowfall accumulations for east central Kansas overnight.

## Late Tonight: Winter Weather Details

### Hazards:

Accumulating snow late this evening into Thursday morning. 1-3 inches are possible with locally higher amounts near the I-35 corridor.

**Areas Impacted:** East central Kansas and portions of northeast Kansas

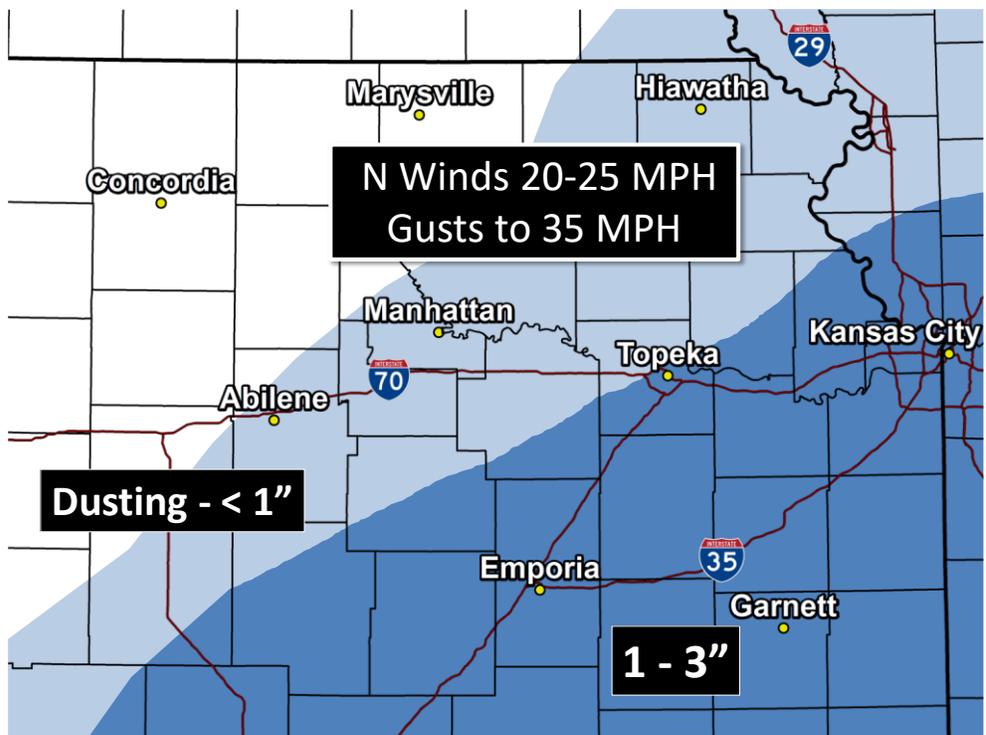

**Timing & Duration:** This evening (mainly after 10 PM) through mid-morning Thursday.

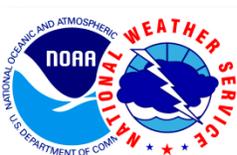

**Impacts:** North winds of 20-25 mph with gusts to 35 mph overnight may cause blowing snow and reduced visibilities. Travel may become hazardous through the morning commute.

**Certainty & Considerations:** Temperatures have trended cooler than previous forecast and confidence is moderate in snowfall occurring. Timing for rain to transition to snow is somewhat uncertain this evening, resulting in slightly higher totals possible (closer to 4 inches) along and south of I-35.

## River Flooding Details

### Moderate Flooding (Occurring or Forecast)

- Marais Des Cygnes at Reading
- Pottawatomie Creek at Lane

### Minor Flooding (Occurring or Forecast)
