## NOAA TECHNICAL MEMORANDA National Weather Service, Western Region Subseries

The National Weather Service (NWS) Western Region (WR) Subseries provides an informal medium for the documentation and quick dissemination of results not appropriate, or not yet ready, for formal publication. The series is used to report on work in progress, to describe technical procedures and practices, or to relate progress to a limited audience. These Technical Memoranda will report on investigations devoted primarily to regional and local problems of interest mainly to personnel, and hence will not be widely distributed.

Papers 1 to 25 are in the former series, ESSA Technical Memoranda, Western Region Technical Memoranda (WRTM); papers 24 to 59 are in the former series, ESSA Technical Memoranda, Weather Bureau Technical Memoranda (WBTM). Beginning with 60, the papers are part of the series, NOAA Technical Memoranda NWS. Out-of-print memoranda are not listed.

Papers 2 to 22, except for 5 (revised edition), are available from the National Weather Service Western Region, Scientific Services Division, 125 South State Street - Rm 1210, Salt Lake City, Utah 84138-1102. Paper 5 (revised edition), and all others beginning with 25 are available from the National Technical Information Service, U.S. Department of Commerce, Sills Building, 5285 Port Royal Road, Springfield, Virginia 22161. Prices vary for all paper copies; microfiche are \$3.50. Order by accession number shown in parentheses at end of each entry.

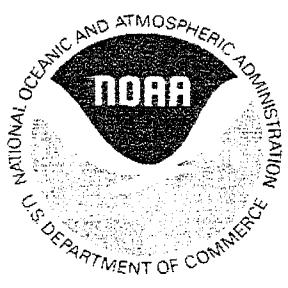

### ESSA Technical Memoranda (WRTM)

- 2 Climatological Precipitation Probabilities. Compiled by Lucianne Miller, December 1965.
- 3 Western Region Pre- and Post-FP-3 Program, December 1, 1965, to February 20, 1966. Edward D. Diemer, March 1966.
- 5 Station Descriptions of Local Effects on Synoptic Weather Patterns. Philip Williams, Jr., April 1966 (Revised November 1967, October 1969). (PB-17800)
- 8 Interpreting the RAREP. Herbert P. Benner, May 1966 (Revised January 1967).
- 11 Some Electrical Processes in the Atmosphere. J. Latham, June 1966.
- 17 A Digitalized Summary of Radar Echoes within 100 Miles of Sacramento, California. J. A. Youngberg and L. B. Overaas, December 1966.
- 21 An Objective Aid for Forecasting the End of East Winds in the Columbia Gorge, July through October. D. John Coparans, April 1967.
- 22 Derivation of Radar Horizons in Mountainous Terrain. Roger G. Pappas, April 1967.

### ESSA Technical Memoranda, Weather Bureau Technical Memoranda (WBTM)

- 25 Verification of Operation Probability of Precipitation Forecasts, April 1966-March 1967. W. W. Dickey, October 1967. (PB-176240)
- 26 A Study of Winds in the Lake Mead Recreation Area. R. P. Augulis, January 1968. (PB-177830)
- 28 Weather Extremes. R. J. Schmidl, April 1968 (Revised March 1986). (PB86 177672/AS). (Revised October 1991 - PB92-115062/AS)
- 29 Small-Scale Analysis and Prediction. Philip Williams, Jr., May 1968. (PB178425)
- 30 Numerical Weather Prediction and Synoptic Meteorology. CPT Thomas D. Murphy, USAF, May 1968. (AD 673365)
- 31 Precipitation Detection Probabilities by Salt Lake ARTC Radars. Robert K. Belesky, July 1968. (PB 179084)
- 32 Probability Forecasting--A Problem Analysis with Reference to the Portland Fire Weather District. Harold S. Ayer, July 1968. (PB 179289)
- 36 Temperature Trends in Sacramento--Another Heat Island. Anthony D. Lentini, February 1969. (PB 183055)
- 37 Disposal of Logging Residues Without Damage to Air Quality. Owen P. Cramer, March 1969. (PB 183057)
- 39 Upper-Air Lows Over Northwestern United States. A.L. Jacobson, April 1969. PB 184296)
- 40 The Man-Machine Mix in Applied Weather Forecasting in the 1970s. L.W. Snellman, August 1969. (PB 185068)
- 43 Forecasting Maximum Temperatures at Helena, Montana. David E. Olsen, October 1969. (PB 185762)
- 44 Estimated Return Periods for Short-Duration Precipitation in Arizona. Paul C. Kangieser, October 1969. (PB 187763)
- 46 Applications of the Net Radiometer to Short-Range Fog and Stratus Forecasting at Eugene, Oregon. L. Yee and E. Bates, December 1969. (PB 190476)
- 47 Statistical Analysis as a Flood Routing Tool. Robert J.C. Burnash, December 1969. (PB 188744)
- 48 Tsunami. Richard P. Augulis, February 1970. (PB 190157)
- 49 Predicting Precipitation Type. Robert J.C. Burnash and Floyd E. Hug, March 1970. (PB 190962)
- 50 Statistical Report on Aercallergens (Pollens and Molds) Fort Huachuca, Arizona, 1969. Wayne S. Johnson, April 1970. (PB 191743)
- 51 Western Region Sea State and Surf Forecaster's Manual. Gordon C. Shields and Gerald B. Burdwell, July 1970. (PB 193102)

# THE CLIMATE OF SEATTLE, WASHINGTON

Dana Felton - NWSFO Seattle

## I. INTRODUCTION

The climate of Seattle is the direct result of the terrain surrounding the area and the proximity of the city to the Pacific Ocean. The Cascade Mountains, east of the city, and, to a lesser extent, the Olympic Mountains, which are located northwest of the city, are the major terrain factors that have an effect on the climate of Seattle. The prevailing weather patterns bring moist marine air from the Pacific into the area creating a climate characterized by mild temperatures, a pronounced though not sharply defined rainy season, and considerable cloudiness, particularly during the winter months. The Cascades are very effective in shielding the Seattle area from the cold, dry continental air during the winter and the hot, dry continental air during the summer months. The extremes of temperatures that occur in western Washington are the result of occasional pressure distributions that force the continental air into the Puget Sound area. The prevailing southwesterly circulation keeps the average winter daytime temperatures in the 40s and the nighttime readings in the 30s. During the summer, daytime temperatures are usually in the

70s with nighttime lows in the 50s. Extremes of temperatures, both winter and summer, are usually of short duration. The dry season is centered around July and August with July being the driest month of the year. The rainy season extends from October through March with December normally the wettest month; however, precipitation is rather evenly distributed through the winter and early spring months with more than 75 percent of the yearly precipitation falling during the winter wet season. Most of the rainfall in the Seattle area comes from storms common to the middle latitudes. These disturbances are most vigorous during the winter as they move through western Washington. The storm track lies well to the north during the summer and those storms that reach the state are not the wind and rain producers of the winter months.

The occurrence of snow in the Seattle area is extremely variable. There are winters on record with zero or only a trace of snow, but at the other extreme, over 21 inches had fallen in a 24-hour period. Usually, winter storms do not produce snow unless the storm moves in such a way to bring cold air out of Canada

directly or with only a short water trajectory.

The highest winds recorded in the Seattle area are associated with strong storms crossing the state from the southwest. Prevailing winds are from the southwest but occasional winter storms will produce strong northerly winds. Winds during the summer months are relatively light with occasional land-sea breeze effects creating afternoon northerly winds of 8 to 15 miles an hour. Fog or low clouds that form over the southern Puget Sound area in the late summer, fall, and early winter months, often dominate the weather conditions during the late night and morning hours. Most of the summer clouds form along the coast and move into the Seattle area from the southwest.<sup>1</sup>

## II HISTORY OF WEATHER RECORDS

The first systematic records of the climate in the Puget Sound region were kept by the Surgeon General's offices at military installations. Records were kept at Fort Steilacoom, near Tacoma, from November 1849 to March 1868 and at Fort Townsend, near Port Townsend, from July 1858 to June 1861 and from August 1873 to March 1895. Climatological records were also kept at several military installations in the San Juan Islands between 1859-1874. Most of the early weather records kept by the

Surgeon General's office included temperature, wind, and state of the weather at 7:00 a.m., 2:00 p.m., 9:00 p.m., and the duration and amount of rainfall.

The first weather records in the immediate vicinity of Seattle were kept from 1878-1899 by R. M. Hoskinson, a volunteer observer living in Madrone (the present city of Winslow) located on Bainbridge Island, nine miles west of Seattle.

The city office was established in August 1890. The city office has been relocated three times since it was established; however, all of the locations have been within two blocks of the original station and within two blocks of the waterfront. The final location of the city office was in the Federal Office Building at 1st and Marion. Observations at the Federal Building ended in November 1972.

Observations began at Seattle-Tacoma International Airport in November 1944. The airport is currently the official weather records site for the Seattle area. The airport is located six miles south of Seattle city limits and 14 miles north of Tacoma. It is situated on a low ridge lying between Puget Sound on the west and the Green River Valley on the east with terrain sloping moderately to the shores of Puget Sound some two miles to the west. The Olympic Mountains, rising sharply from Puget Sound, are about 50 miles to the northwest. Rather steep bluffs border the Green River Valley about two and a half miles to the east and the foothills of the Cascade Range begin 10 to 15 miles to the east of the airport.<sup>1</sup>

## NOAA SCIENTIFIC AND TECHNICAL PUBLICATIONS

*The National Oceanic and Atmospheric Administration* was established as part of the Department of Commerce on October 3, 1970. The mission responsibilities of NOAA are to assess the socioeconomic impact of natural and technological changes in the environment and to monitor and predict the state of the solid Earth, the oceans and their living resources, the atmosphere, and the space environment of the Earth.

The major components of NOAA regularly produce various types of scientific and technical information in the following kinds of publications.

**PROFESSIONAL PAPERS**--Important definitive research results, major techniques, and special investigations.

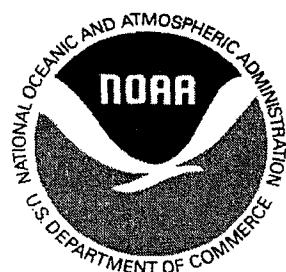

**CONTRACT AND GRANT REPORTS**--Reports prepared by contractors or grantees under NOAA sponsorship.

**ATLAS**--Presentation of analyzed data generally in the form of maps showing distribution of rainfall, chemical and physical conditions of oceans and atmosphere, distribution of fishes and marine mammals, ionospheric conditions, etc.

**TECHNICAL SERVICE PUBLICATIONS**--Reports containing data, observations, instructions, etc. A partial listing includes data serials; prediction and outlook periodicals; technical manuals, training papers, planning reports, and information serials; and miscellaneous technical publications.

**TECHNICAL REPORTS**--Journal quality with extensive details, mathematical developments, or data listings.

**TECHNICAL MEMORANDUMS**--Reports of preliminary, partial, or negative research or technology results, interim instructions, and the like.

Information on availability of NOAA publications can be obtained from:
